dialogic education for the internet age argues that despite rapid advances in communications technology most teaching still relies on traditional approaches to education built upon the logic of print and dependent on the notion that there is a single true representation of reality in practice the use of the internet disrupts this traditional logic of education by offering an experience of knowledge as participatory and multiple this new logic of education is dialogic and characterises education as learning to learn think and thrive in the context of working with multiple perspectives and ultimate uncertainty the book builds upon the simple contrast between observing dialogue from an outside point of view and participating in a dialogue from the inside before pinpointing an essential feature of dialogic the gap or difference between voices in dialogue which is understood as an irreducible source of meaning each chapter of the book applies this dialogic thinking to a specific challenge facing education re thinking the challenge and revealing a new theory of education areas covered in the book include dialogical learning and cognition dialogical learning and emotional intelligence educational technology dialogic spaces and consciousness global dialogue and global citizenship dialogic theories of science and maths education the challenge identified in wegerif s text is the growing need to develop a new understanding of education that holds the potential to transform educational policy and pedagogy in order to meet the realities of the digital age dialogic education for the internet age draws upon the latest research in dialogic theory creativity and technology and is essential reading for advanced students and researchers in educational psychology technology and policy

how did openness become a foundational value for the networks of the twenty first century open standards and the digital age answers this question through an interdisciplinary history of information networks that pays close attention to the politics of standardization for much of the twentieth century information networks such as the monopoly bell system and the american military s arpanet were closed systems subject to centralized control in the 1970s and 1980s however engineers in the united states and europe experimented with design strategies to create new digital networks in the process they embraced discourses of openness to describe their ideological commitments to entrepreneurship technological innovation and participatory democracy the rhetoric of openness has flourished for example in movements for open government open source software and open access publishing but such rhetoric also obscures the ways the internet and other open systems still depend heavily on hierarchical forms of control
